WEEK 4 · SETUP PHASE · AI MARKETING

One Angle, Five Channels: Copywriting Strategy

Multi-Channel Adaptation of the 18.9% Content Age Gap Insight

Copywriter: KM Siam
Date: November 2026
Platform: Google Antigravity

ORIGINAL SOURCE	CORE ANGLE	CHANNELS ADAPTED	CORE PARADIGM
state-of-seo-2026.flyrank.ai	**The 18.9% Age Gap**	**Landing, Meta, Display, Email, In**	**Refresh > New Publishing**

The Strategic Angle

"Stop publishing new content. Fix the pages Google already sees." Growing pages are 18.9% younger (185 vs 228 days), while word count differences are virtually non-existent (1,487 vs 1,481 words). Traffic decay is caused by age and stale citations, not length.

1. Multi-Channel Copywriting Comparison Matrix

Channel	Target Persona	Format & Length	Emotional Tone	Call to Action (CTA)
Sales Landing Page	B2B SaaS Growth Leads	Long (350 words)	Authoritative, Benefit-Led	Run Free 60-Second Decay Scan
Meta Ad (FB/IG)	Performance Marketers	Short (120 words)	Disruptive Pattern-Interrupt	Learn More → Free Scanner
Google Display Ad	High-Intent Searchers	Micro (25 words)	Laser-focused, Direct	Scan Your Site Free
Cold Outreach Email	SaaS Founders & CMOs	Conversational (135 words)	Peer-to-Peer, Zero Hype	Soft Ask (2-Min Loom Video)
LinkedIn Post	Growth Leaders & SEOs	Medium (240 words)	Data Storytelling, Analytical	Open Discussion & Report Link

2. Concrete Channel Executions

1. Sales Landing Page (Above-the-Fold + Problem Framing)

Benefit-Led Architecture

Headline: Your Top 10 Blog Posts Are Losing Traffic. Writing More Content Won't Save Them.

Subhead: FlyRank analyzed 120,700 URLs and found that growing and declining pages have the exact same word count (1,480 words). The real killer? Age. Growing pages are 18.9% younger. FlyRank autonomously diagnoses and refreshes the URLs Google already indexes—recovering lost clicks in 14 days without hiring more writers.

CTA: Run a Free 60-Second Content Decay Audit → (Instant 3-point technical diagnosis, zero friction).

2. Meta Ad (Scroll-Stopping Pattern Interrupt)

Casual & Disruptive

Hook: Before you pay an agency another $3,000 for "10x skyscraper blog posts," look at this number: **1,487 vs. 1,481.**

We just audited 120,700 live URLs. That's the average word count of pages gaining Google traffic versus pages actively dying. A 6-word difference. Word count is completely irrelevant. The metric deciding whether you rank or tank? Age. Growing pages are 18.9% younger (185 days vs. 228 days). After ~200 days, Google starts pulling impressions away from old guides to test fresher sources. Your content isn't bad—it just expired. Stop writing new posts from scratch. Scan your domain free.

3. Google Display Ad (Responsive Banner Copy)

Ultra-Concise

Short Headline (30 chars): Content Traffic Dropping?

Long Headline (90 chars): 120k URLs prove older content loses rank. Refresh URLs Google already sees.

Description (90 chars): Stop paying for 3,000-word articles. Automate SEO refreshes & recover rank in 14 days.

CTA: Scan Your Site Free

4. Cold Outreach Email (Personal & Low-Key)

Zero Hype · Soft Ask

Subject: quick question on [Company]'s older blog posts

Hey [First Name], saw [Company]'s recent guide on [Topic]—great breakdown. Looking at your subfolder sitemap, I noticed about a dozen of your top 2023–2024 guides haven't been updated in over 200 days. We just published a 120k-URL study (state-of-seo-2026.flyrank.ai) showing growing pages are 18.9% younger than decaying ones, while word count is basically identical. Most growth teams keep spending budget on net-new articles when refreshing pages Google already knows produces 3x the ROI. Ran a quick audit on 3 of your older URLs and found quick schema and entity fixes. Mind if I drop the 2-minute Loom breakdown here? — KM Siam, Growth @ FlyRank

5. LinkedIn Post (Conversational Thought Leadership)

Earns Attention First

Hook: The hardest lesson we learned after analyzing 120,700 URLs and 1.7 million sessions: *You cannot write your way out of a content decay problem.*

For years, the standard B2B SEO playbook was: find a keyword, hire a writer for a 3,000-word skyscraper guide, publish, and move on. The post peaks at Day 90. By Day 180, impressions slide. By Day 240, AI Overviews take over. The data told a completely different story: word count of growing pages is 1,487 vs 1,481 for declining pages. The real dividing line? Age (185 days vs 228 days). If your organic traffic feels stuck, stop putting 100% of your budget into new drafts. Refresh what Google already sees.
